

MAP AND GLOBE SKILLS

Read a Relief and Elevation Map

Directions Study the relief and elevation maps below. Use the maps to help you answer the questions that follow on page 29.

A **relief map** shows what kinds of land are located in a region using color or shading. A dark color shows high land, and lower, flatter land is shown with lighter colors. An **elevation map** measures the height of land from sea level. An elevation map uses patterns that connect all the areas that are the same height.
